Specifically regarding independent claim 2, none of the prior art alone or in combination disclose or teach of the claimed optical switch specifically wherein the mirror is formed on a smoothed major crystal plane of a layer of single-crystal silicon and has a reflectivity greater than 96%.

Specifically regarding independent claims 5 and 13, none of the prior art alone or in combination disclose or teach of the claimed optical switch specifically wherein the mirror has a first mirrored surface and a second mirrored surface.

Specifically regarding independent claim 9, none of the prior art alone or in combination disclose or teach of the claimed MEMs optical cross connect specifically wherein at least one of the first and second metallic mirrors has a minimum face dimension of greater than about 400 microns.

Specifically regarding independent claim 14, none of the prior art alone or in combination disclose or teach of the claimed optical switch specifically wherein the first mirrored side and the second mirrored side is formed on a smoothed major crystal plane of a layer of single-crystal silicon and has a reflectivity greater than 96%.

Art Unit: 2873

Specifically regarding independent claim 15, none of the prior art alone or in combination disclose or teach of the claimed optical switch specifically wherein first optical input is disposed between 12-57 mm from the first optical output.

Specifically regarding independent claim 16, none of the prior art alone or in combination disclose or teach of the claimed optical switch specifically wherein first optical input is disposed between 12-57 mm from the first optical output and wherein at least one of the first and second metallic mirrors has a minimum face dimension of greater than about 400 microns.

Specifically regarding independent claim 19, none of the prior art alone or in combination disclose or teach of the claimed MEMs optical cross connect specifically wherein the first metallic mirror has a minimum face dimension of greater than about 400 microns.

Specifically regarding independent claim 23, none of the prior art alone or in combination disclose or teach of the claimed optical cross connect specifically wherein the switching signal has a maximum voltage less than 10 volts.

Specifically regarding independent claim 24, none of the prior art alone or in combination disclose or teach of the claimed optical cross connect specifically wherein the optical cross connect switches 2N optical switch dice in less than about 50mS with an average power consumption of less than 2N/50 Watts.

Specifically regarding independent claims 29 and 33-35 none of the prior art alone or in combination disclose or teach of the claimed method for operating an optical cross connect specifically involving measuring and comparing an impedance of the optical switch to a reference value and providing a switch state output.

Art Unit: 2873

Specifically regarding independent claim 37 none of the prior art alone or in combination disclose or teach of the claimed method of manufacturing an optical cross connect wherein the cross is operated in a manner by providing a plurality of electronic control signals to a plurality of micro-electro-mechanical system optical switch dice in the optical cross connect to configure the optical cross connect to a selected configuration; removing electrical input to the optical cross connect; and maintaining the selected configuration.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
